About me

I am a first-class honours Computer Science student with a flair for developing technical solutions to client challenges. Whether it is creating a bespoke website or using key OO practices to ensure optimum application maintainability, I enjoy working as part of a team to really crack a client brief.

Throughout the course of my degree, I have developed a high level of technical capabilities (I am adept in PHP, JavaScript, C#, Python, and standard web languages) along with key software development processes such as creating full testing suites and ensuring software meets data security guidelines. My time studying, combined with my industry experience, has taught me the time-management, organisational and communication skills needed to add value in your company.

Web Developer at Samera
February 2021 – Present
